ADIGE CUTTING LINES 'Cut-Piece' Marking System

To meet the increased market demand for component traceability and safety, ADIGE has developed a cut-piece marking system, including the following features:

- programmable mechanical dot marking device, integrated in the cutting line
- possibility of marking and cutting simultaneously, to minimise cycle times
- possibility of associating a character series for each individual cut component
- fully programmable system

Our technical sales staff is at your complete disposal for further information or to arrange a demonstration.
