## BLM E-TURN

Fully electric in-process right and left bending machine with 3D visual graphic programming (VGP3D).

Main features:

- fully electric machine without mechanical adjustments
- in-process right and left bending, with fixed or variable radius
- reduced time for programming and change-over
- increased repeatability, due to the higher accuracy of electric axes
- enhanced productivity (up to 20% more if compared to hydro-electric machines)
- widest flexibility, due to the reduced dimension of the bending head and to the free positioning of variable radius tools and bending
- production of complex geometries
- tools holders designed for a full interchangeability with other machines
- integrated load/unload
- interactive 3D graphic programming with touch screen (VGP3D)

Our technical sales staff is at your complete disposal for further information or to arrange a demonstration. Contact BLM tel. +39 031 7070200 • e-mail: [export@blm.it](mailto:export@blm.it) • [www.blmgroup.com](http://www.blmgroup.com)
